

# Kan COVID-19 vara en katalysator som bidrar till att distansarbete blir normen?

2020-05-22 07:42 CEST

## Kan COVID-19 vara en katalysator som bidrar till att distansarbete blir normen?

En undersökning gjord av Colliers International som baseras på svar från 3 000 respondenter från över 25 olika länder visar att 82 % av dem skulle vilja arbeta hemifrån minst en dag i veckan efter att COVID-19-krisen är över.

**Thomas Jalde, Director Corporate Solutions:** *”Det är intressant att se de första resultaten från vår undersökning om att arbeta hemifrån och det ska bli väldigt spännande att följa upp slutresultatet av undersökningen. När det börjar återgå till det ”normala” är jag säker på att många företag kommer att se över, och utvärdera organisationens arbetssätt och vad som fungerat och inte fungerat vid*

*hemarbetet. Det kommer också att vara intressant att titta på nyttjandet av kvm/anställd och hur arbetsplatsen är utformad.*

*Företagens behov är självklart olika, men i slutändan är kostnaden per arbetsplats och den totala lokalkostnaden en av de viktigaste kostnadsparametrarna för ett företag.*

*I Sverige har de flesta väldigt bra uppkopplingsmöjligheter i sina hem. Jag kan för min egen del se att det finns saker som behövs förbättras om hemarbetet blir mer permanent, främst ur ett ergonomiskt perspektiv. Självklart påverkas arbetet av hur ens livssituation ser ut, om man har familj etc. För mig har det varit viktigt att få in fasta dagliga rutiner.”*

Slutresultatet av hela rapporten beräknas presenteras till sommaren.

The coronavirus pandemic could be the catalyst for increased working from home in the future, a survey by global real estate advisor Colliers International has revealed.

The ‘Working from home during COVID-19’ survey was launched by Colliers to discover people’s experiences of the shift to remote working introduced by businesses around the world in response to the coronavirus (COVID-19) outbreak.

Initial insights based upon over 3,000 responses from over 25 countries, from a broad spectrum of office-based professions, show that:

82% would like to work remotely one day a week or more after the COVID-19 crisis is over.

71% of people who had never worked from home before COVID-19 would like to work remotely at least one day a week in future.

53% cent of those surveyed believe their productivity has not changed as a result of working from home, and 24 per cent believe their productivity has increased. However, 23 per cent said their productivity has declined.

Productivity has increased most in the financial services, professional services and technology industry. Productivity has decreased most in the legal and education & research sector.

55% consider they are able to perform individual, focussed work better or much better working from home than in the office.

76% of respondents still feel connected to their team while working remotely, despite the physical distance. However, 58 per cent believe they are better able to collaborate from the office compared to from home.

**Chris McLernon, Chief Executive Officer for Europe, Middle East and Africa at Colliers International**, said initial survey results indicated that the coronavirus pandemic would bring about fundamental changes in ways of working.

*“We are in the middle of the largest remote work trial in human history which will have a significant impact on the way we will work in the future,”* he said.

*“It is essential to understand how people are experiencing working from home during this challenging period, and this study from the Workplace Advisory team of Colliers International is uncovering unique global data that will help us to provide fact-based advice on short term improvements and long term impact.”*

*“Already it is clear that many people are embracing working from home, and are likely to want to continue a certain level of remote working for part of the week, even when they are able to return to their offices.”*

The initial ‘Working from home during COVID-19’ survey will conclude at the end of April and a report will then be published. It is the first part of a multi-phased study by Colliers, which aims to give insights into working from home during the COVID-19 outbreak, and in doing so identify opportunities for improvements and explore longer term implications for office space.

**Jan Jaap Boogaard, Head of Colliers Workplace Advisory for Europe, Middle East and Africa**, said: *“We find ourselves in a challenging, but also unique situation which offers opportunities to rethink the way we work.”*

*“We should use this opportunity to measure what works and what doesn’t work to benefit from in the future, which is why we started our working from home study.”*

*“First results show some very interesting insights. The majority of the people have indicated that productivity has not changed since working from home. Approximately the same number of people have indicated their productivity has increased as those who say theirs has decreased.”*

*“Also, over 70 percent of people who had never worked from home before COVID-19 would like to work at least one day a week remotely in the future. This will have a significant impact on the space requirements of organisations.”*

*Details from the initial findings of the survey indicate a desire to continue flexible working to some extent after the COVID-19 crisis. A total of 49 per cent said they would like to work on average 1-2 days remotely, while 32 per cent wanted to work three or more days remotely, and 19 per cent wanted to work remotely for less than one day.*

*Differences were apparent between people who had recently started working from home, and people who had already been working from home for a couple of weeks. Of those who had already been working from home for four weeks because of COVID-19, only 7 per cent wanted to go back to working in the office every day after the end of the pandemic. By contrast, among those who had been working from home for just a week a total of 22 per cent wanted to return to spending their working week in the office after COVID-19.*

*The survey also revealed that experiences of working from home differed between those with and without children in the house, and those with housemates.*

*A total of 33 per cent of respondents reported having more distractions when working from home. The top distraction was identified as children, followed by other people in the household and pets.*

*People living alone and those who live with a spouse or partner showed the lowest productivity decrease.*

*The main location for working from home was an enclosed room dedicated to work (39 per cent), followed by the living room (32 per cent), the bedroom (17 per cent) and the kitchen (15 per cent). The majority of those who live alone chose to work from their living rooms, but the majority of the people with children worked from an enclosed room dedicated to work.*

*The initial survey results also showed that people with housemates would like to work more from the office after the COVID-19 situation, compared to people who live alone, people with children and people that live with a spouse or significant other.*

---

## Om Colliers International Sverige

Colliers International är ett ledande företag inom global fastighetsrådgivning präglad av entreprenörsanda. Vårt svenska team består av ca 40 experter som arbetar med att öka lönsamheten för investerare, fastighetsägare, byggherrar och hyresgäster. Genom vår goda expertis och höga servicenivå skapar vi effektiva lösningar som hjälper våra kunder att *uppnå framgång snabbare*. Colliers experter erbjuder kvalificerad kunskap inom Capital Markets, Leasing, Corporate Solutions samt Valuation. Med kontor i Stockholm och Göteborg samt ett starkt skandinaviskt samarbete ser vi till att våra kunder får professionell rådgivning inom alla delar av fastighetsmarknaden. Colliers International i Sverige ägs utav Colliers International Group Inc.
